Wind Energy

Throughout history, communities have harnessed the power of the wind. Now, driven by the need to reduce greenhouse gas emissions and secure home-grown energy supplies, wind energy is the world's fastest growing renewable energy type.

Wind energy already makes a significant contribution to the UK, with an output of 15.5TWh in 2011 — equivalent to the annual electricity demand of 4.7 million homes.

ABOUT US

Since 1914 we have offered vocationally inspired education relevant for the age. Back then our focus was on mining and ceramics. But times have changed and we have too. Now we're delivering everything from Computer Games Design to Forensic Science.

Our vision and values are the foundation of Staffordshire University; it's how we do things. That'll never change.
